## Eurostat publication

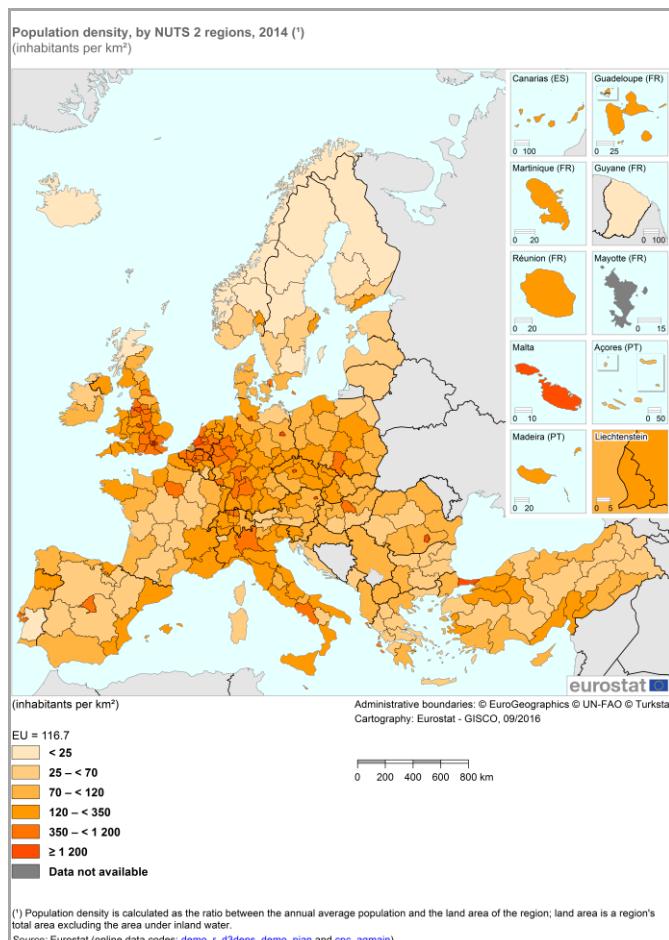

# Regional yearbook 2016: my region in figures

Is life expectancy in my region higher than in other regions in the **European Union (EU)**? Is my region richer than others? Does it have fewer road accidents? Does it have many households with broadband internet connection? The answers to these questions and many more are found in the 2016 edition of the [regional yearbook](#), published each year by **Eurostat, the statistical office of the European Union**. The regional yearbook provides an overview of the wide range of regional statistics available for the 276 NUTS level 2 regions and, for some indicators, the 1 342 NUTS level 3 regions of the 28 Member States of the EU as well as, when available, the regions in EFTA and candidate countries.

The **Eurostat regional yearbook 2016** contains chapters on regional policies and Europe 2020, population, health, education, labour market, gross domestic product, structural business statistics, research and innovation, information society, tourism, transport and agriculture. It also includes two special focus chapters: commuting patterns between regions and regional population projections.

In addition to the regional yearbook, Eurostat offers applications for visualising and analysing sub-national data: the two interactive website applications [Regional Statistics Illustrated](#) and [Statistical Atlas](#), as well as the mobile device application [My Region](#).

This News Release presents data on regional population density as well as data from the regional population projections chapter of the Eurostat regional yearbook 2016.

## Population density highest in Inner London

In 2014 the most densely populated NUTS 2 regions in the EU were **Inner London – East** (10 780 inhabitants per km<sup>2</sup>) and **Inner London – West** (10 283) in the United Kingdom, followed by **Brussels** in Belgium (7 393), **Melilla** in Spain (6 479) and **Vienna** in Austria (4 507).

## Population of five EU regions projected to double or almost double by 2050...

In a small majority of the NUTS 2 regions for which data are available, the population is projected to increase between 2015 and 2050. The population is projected to more than double in the Spanish region **Melilla** (+127%) and almost double in four other regions: the French overseas department of **Guiana** (+95%), **Luxembourg** (+87%), **Brussels** in Belgium (+83%) and **Ceuta** in Spain (+82%). Increases of more than 60% are also projected for **Inner London – East** in the United Kingdom (+62%) and **Stockholm** in Sweden (+61%).

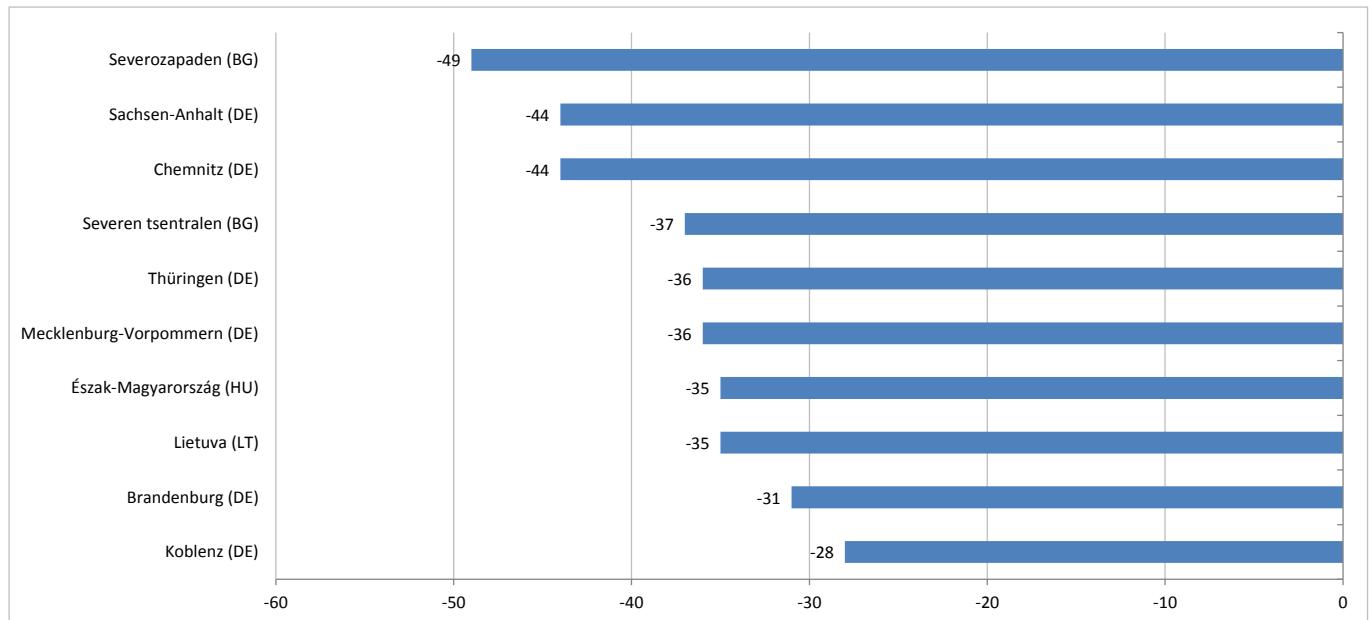

### NUTS 2 regions with the highest projected population increases, 2015-2050 (%)

### ...while population of three other EU regions projected to almost halve by 2050

In the other NUTS 2 regions the population is projected to decrease between 2015 and 2050. The population is projected to almost halve in **Severozapaden** in Bulgaria (-49%), as well as the German regions of **Sachsen-Anhalt** and **Chemnitz** (both -44%). Falls of more than a third are also projected for **Severen tsentralen** in Bulgaria (-37%), **Thuringia** and **Mecklenburg-Vorpommern** in Germany (both -36%), as well as **Észak-Magyarország** in Hungary and **Lithuania** (both -35%).

## Four German regions projected to have more people aged 65+ than of working-age in 2050...

In four NUTS 2 regions, all located in eastern Germany, the old-age dependency ratio is projected to reach or exceed 100% by 2050, meaning that there will be as many or even more people aged 65 and over as there will be aged 15-64: **Chemnitz**, **Saxony-Anhalt**, **Mecklenburg-Vorpommern** and **Brandenburg**. Old-age dependency ratios of 80% and over are also projected for **Thuringia** in Germany (91%), as well as **Castile and León** (82%) and **Asturias** (80%) in Spain.

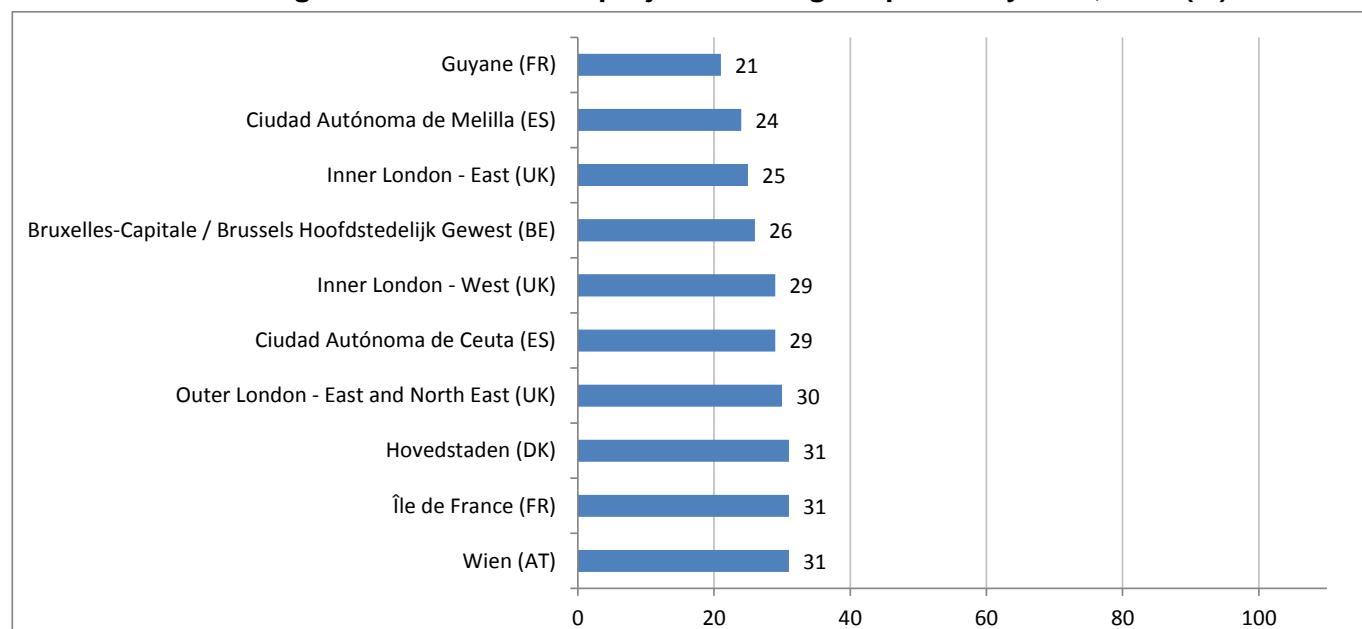

NUTS 2 regions with the highest projected old-age dependency ratio, 2050 (%)

## ...while there will be at least four persons of working age for each person aged 65+ in four other EU regions

In contrast, it is projected that there will be around five persons of working age for each person aged 65 and over in 2050 in the French overseas department of **Guiana** (projected old-age dependency ratio of 21%) and around four in **Melilla** in Spain (24%), **Inner London – East** in the United Kingdom (25%) and **Brussels** in Belgium (26%). The projected old-age dependency ratio is also 30% or lower in **Inner London - West** in the United Kingdom and **Ceuta** in Spain (29% each), as well as **Outer London – East and North East** in the United Kingdom (30%).

NUTS 2 regions with the lowest projected old-age dependency ratio, 2050 (%)

France: no data available for Guadeloupe and Mayotte

Slovenia: only data at national level available under the NUTS 2013 classification

The source dataset can be found [here](#) (based on NUTS 2010 classification).

## Geographical information

The regional yearbook uses the 2013 version of the [Nomenclature of Territorial Units for Statistics \(NUTS 2013\)](#).

In the NUTS 2013 classification, the EU has 276 regions at NUTS level 2: Belgium - BE (11), Bulgaria - BG (6), the Czech Republic - CZ (8), Denmark - DK (5), Germany - DE (38), Ireland - IE (2), Greece - EL (13), Spain - ES (19), France - FR (27), Croatia - HR (2), Italy - IT (21), Hungary - HU (7), the Netherlands - NL (12), Austria - AT (9), Poland - PL (16), Portugal - PT (7), Romania - RO (8), Slovenia - SI (2), Slovakia - SK (4), Finland - FI (5), Sweden - SE (8) and the United Kingdom - UK (40). Estonia (EE), Cyprus (CY), Latvia (LV), Lithuania (LT), Luxembourg (LU) and Malta (MT) are all considered as single NUTS 2 regions.

EFTA countries: Norway - NO (7) and Switzerland - CH (7). Iceland (IS) and Liechtenstein (LI) are considered as single level 2 regions.

Candidate countries: Albania - AL (3) and Turkey - TR (26), Montenegro (ME) and the former Yugoslav Republic of Macedonia (MK) are considered as single level 2 regions. For Serbia (RS), data are currently available at national level only.

In the NUTS 2013 classification, the EU has 1 342 regions at NUTS level 3: Belgium (44), Bulgaria (28), the Czech Republic (14), Denmark (11), Germany (402), Estonia (5), Ireland (8), Greece (52), Spain (59), France (101), Croatia (21), Italy (110), Latvia (6), Lithuania (10), Hungary (20), Malta (2), the Netherlands (40), Austria (35), Poland (72), Portugal (25), Romania (42), Slovenia (12), Slovakia (8), Finland (19), Sweden (21) and the United Kingdom (173). Cyprus and Luxembourg are considered as single NUTS 3 regions.

EFTA countries: Iceland (2), Norway (19) and Switzerland (26). Liechtenstein is considered as a single level 3 region.

Candidate countries: Albania (12), the former Yugoslav Republic of Macedonia (8) and Turkey (81). Montenegro is considered as a single level 3 region. For Serbia, data are currently available at national level only.

## Methods and definitions

**Population density** is the ratio between the annual average population and the land area of a region. It is expressed in inhabitants per square kilometre ( $\text{km}^2$ ).

Eurostat Europop 2013 **population projections** result from the application of a set of assumptions on future developments for fertility, mortality and net migration. The projections should not be considered as forecasts, as they show what would happen to the resulting population structure if those assumptions apply; in other words, the projections are 'what-if' scenarios.

The regional population projections were produced using the 2010 version of NUTS. All of the data for the regional population projections used in the regional yearbook have been converted to NUTS 2013. The conversion of the data has had the following consequences at NUTS level 2: data for the French region of Guadeloupe are not available, only national data are available for Slovenia, and in some cases data for London are shown at NUTS level 1. The conversion of the data has had the following consequences at NUTS level 3: data for a number of regions are not available, while data for Athens (Greece), Opolskie (Poland), London and Greater Manchester (the United Kingdom) are shown at NUTS level 2.

The **projected old-age dependency ratio** is the ratio between the projected number of persons aged 65 and over and the projected number of persons aged between 15 and 64. The value is expressed per 100 persons of working age (15-64).

## Revisions and timetable

Data in this News Release may differ from that in the regional yearbook, due to updates made after the extractions used for the publication.
